*De*

In light of communication on 12/1/2005, the previous Office action is withdrawn.  
This is new ground of rejection.

**Claim Rejections**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

**Claims 1- 14 are rejected** under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claim 5 of Patent 6,756,620 B2**. Although the conflicting claims are not identical, they are not patentably distinct from each other because *it would have been obvious to one of ordinary skill in the art at the time of the invention was made to* form a first metal electrode layer; a metal nitride layer; a polymer ferroelectric layer; a metal oxide layer; and a second metal electrode layer; wherein the metal nitride and metal oxide layers contain excess holes to recombine with electrons injected from the first and second metal electrode layers *by introducing* a first aluminum or copper electrode; a first refractory metal nitride or oxide protective film; a ferroelectric polymer structure; a second refractory metal nitride or oxide protective film ; and a second aluminum or copper electrode *in order to* define inventive Polymer Memory Device with Electron Traps.

**Claims 29- 37 are rejected** under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claim 5 of Patent 6,756,620 B2**. Although the conflicting claims are not identical, they are not patentably distinct from each other because *it would have been obvious to one of ordinary skill in the art at the time of the invention was made to* form a metal nitride layer; a polymer ferroelectric layer; a metal oxide layer; wherein the metal nitride and metal oxide layers include a plurality of electrons traps *by introducing* a first refractory metal nitride or oxide

protective film; a ferroelectric polymer structure; and a second refractory metal nitride or oxide protective film *in order to* define inventive Polymer Memory Device with Electron Traps.
